

ABBY RANSON

Senior Technical Advisor • Principal Engineer • Architect

[linkedin.com/in/abbyranson](https://www.linkedin.com/in/abbyranson) • github.com/ranson21 • 202-740-2370 • abby@abbyranson.com

Senior technical leader with software engineering experience since 2016 and earlier systems administration experience. Principal-level engineer and architect who improves platform reliability, delivery systems, and application architecture while staying hands-on in implementation.

TECHNICAL EXPERTISE

Systems & Architecture

Architecture & Technical Direction

System design, modernization strategy, platform architecture, service boundaries, technical leadership

Reliability & Operations

Production operations, observability, performance, supportability, systems administration foundation

Application Engineering

Full-Stack Delivery

Java, Go, Node.js, Ruby, Python, Angular, React, APIs, internal tools, enterprise applications

Product & UX Systems

Design systems, usability, accessibility, workflow design, product-minded implementation

Cloud & Delivery

Platform & Infrastructure

AWS, Azure, GCP, Docker, Kubernetes, Terraform, cloud-native delivery environments

CI/CD & Automation

Jenkins, CircleCI, GitHub Actions, pipeline libraries, automation, release workflows

PROFESSIONAL EXPERIENCE

Sky Solutions LLC

Sr. Technical Advisor (UCM)

October 2025 – Present

Stack: Java/Angular | Platform: AWS | Business Area: Government/Legal

- Promoted to Sr. Technical Advisor in recognition of technical leadership, architectural guidance, and delivery impact across the program
- Advise on technical direction, release strategy, and engineering workflows while continuing to contribute directly to implementation
- Partner across engineering, design, and delivery stakeholders to improve platform stability, modernization planning, and execution quality

Sky Solutions LLC

Software Engineer (UCM)

September 2024 – October 2025

Stack: Java/Angular | Platform: AWS | Business Area: Government/Legal

- Led a critical Angular upgrade across three framework versions with zero downtime while preserving feature parity and production stability
- Built a complete local development environment that improved developer productivity and accelerated delivery
- Established a stronger engineering partnership with design, helping implement a shared design system across multiple applications
- Improved release management through automated CI/CD workflows, reducing deployment time and eliminating recurring manual errors

TISTA Science & Technologies

Software Engineer (UCM)

February 2023 – September 2024

Stack: Java/Angular | Platform: AWS | Business Area: Government/Legal

- Engineered sophisticated solutions for complex frontend architectural challenges
- Architected and implemented modular AngularJS component library

Software Engineer (CTO Team)

January 2022 – February 2023

Stack: NodeJS+Go/React | Platform: AWS | Business Area: Company IDP

- Helped build an internal developer platform to improve engineering workflows and delivery consistency
- Built CLI tooling that streamlined developer workflows and reduced friction across teams
- Designed and implemented an IoT device simulator and shared Jenkins pipeline library

Software Engineer (Caseflow)

March 2020 – January 2022

Stack: React on Rails | Platform: AWS | Business Area: Government/Legal

- Improved page load performance by 400% through state management, caching, and lazy loading improvements
- Led a migration to Jest and added 300+ tests, increasing confidence in releases and improving coverage
- Implemented automated accessibility testing to support Section 508 compliance across the application

NewWave Telecom & Technologies

Sr. Full Stack Developer

June 2019 – March 2020

Stack: NodeJS/React | Platform: Azure | Business Area: Government/Health

- Led a cross-functional team of 5 engineers in delivering an enterprise storage solution ahead of schedule
- Designed and implemented a private NPM registry and design system package that reduced UI development time
- Built a microservice transport utility for Azure Service Bus integration supporting high-volume, reliable message processing

Full Stack Developer

June 2018 – June 2019

Stack: Various | Platform: Various | Business Area: Various

- Led development of an application scaffolding proof of concept to accelerate delivery for future teams
- Designed and implemented a reusable UI component library based on Material Design
- Built a secure document sharing platform for a CMS portal with encryption and access controls for sensitive data

The American Society for Engineering Education (ASEE)

Full Stack Developer

October 2016 – June 2018

Stack: Ruby on Rails | Platform: On-Premise | Business Area: Education

- Owned end-to-end application delivery for multiple critical features while maintaining strong production stability
- Designed and deployed a modernized user interface for ASEE's primary website
- Improved a legacy Ruby codebase through targeted refactoring and maintainability improvements

The Community Partnership for the Prevention of Homelessness (TCP)

System Administrator

March 2014 – October 2016

- Built Excel automation workflows that reduced data analysis time by 75% and removed repetitive manual work
- Administered and optimized the Homelessness Management Information System (HMIS) supporting 50+ partner organizations
- Created automated reporting workflows for HUD and congressional reporting requirements, reducing turnaround time while improving accuracy

EDUCATION & CERTIFICATIONS

ABA, Germanna Community College (2009 – 2012)

Twilio Platform
Certificate

Looker Certificate

NNG UX Certificate
