

Abigail Ranson

PLATFORM ENGINEER · CLOUD ARCHITECT

abby@abbyranson.com · 202-740-2370 · Remote · United States · abbyranson.com · linkedin.com/in/abbyranson · github.com/ranson21

SUMMARY

Platform engineer with 10 years of full-stack and infrastructure work, building the systems engineering teams run on — internal developer platforms, CI/CD, and the policy and observability layer that keeps regulated, multi-tenant production environments shippable. Sysadmin foundation, hands-on at the principal level. Currently focused on **agent-ready cloud infrastructure**: composable platforms, deploy-time guardrails, and the substrate AI-driven engineering needs to ship safely at scale. Comfortable moving between architectural direction and the keyboard, with a long track record of shipping under federal and Section 508 compliance constraints.

SKILLS

Cloud & Infrastructure	AWS, Azure, GCP, Kubernetes, Docker, Terraform, Terragrunt, Helm, Linux administration, multi-tenant architecture, identity & secrets management
Platform & Delivery	Internal developer platforms (IDP), CI/CD (Jenkins, CircleCI, GitHub Actions), GitOps, shared pipeline libraries, release engineering, build & deploy automation, paved-path tooling
AI Infrastructure	Agent-ready deploy paths, policy-as-code, eval & observability for non-deterministic systems, composable async event pipelines, capability interchangeability primitives
Languages	Go, Java, TypeScript, JavaScript, Python, Ruby, Bash, SQL
Application	React, Angular, Node.js, Spring, Rails, REST/gRPC, Postgres, design systems, accessibility-first UI
Practices	Architecture & modernization, observability (OpenTelemetry, Prometheus, Grafana), Section 508 / WCAG, federal compliance, technical leadership, mentorship, user-centered system design

EXPERIENCE

Sky Solutions LLC

Sep 2024 – Present

- Sr. Technical Advisor · Oct 2025 – Present (promoted)
- Software Engineer · Sep 2024 – Oct 2025
- Stack: Java / Angular · Cloud: AWS · Domain: Federal / Legal modernization
- ▶ Promoted to Sr. Technical Advisor inside 13 months for delivery and architectural leadership across a multi-team federal modernization program.
 - ▶ Advise on technical direction, release strategy, and engineering workflows while continuing to ship implementation work — the explicit “principal who still codes” mandate.
 - ▶ Led an Angular framework upgrade across three major versions with zero customer-facing downtime, preserving feature parity for a Section 508-regulated user base.
 - ▶ Designed and shipped a one-command local development environment that eliminated multi-day onboarding and unblocked parallel feature work across teams.
 - ▶ Partnered with design leadership to roll out a shared design system across multiple applications, replacing ad-hoc per-app styling and tightening accessibility coverage.
 - ▶ Strengthened release management through automated CI/CD workflows — reduced deploy time, eliminated recurring manual errors, and made promotions auditable.

TISTA Science & Technology

Mar 2020 – Sep 2024

- Software Engineer · Federal Modernization & Internal Developer Platform · 4.5 years
- Stack: Java/Angular, Node+Go/React, React-on-Rails · Cloud: AWS · Domain: Federal / Legal + Internal Platform
- ▶ **Federal Modernization (Feb 2023 – Sep 2024)** — Engineered solutions for complex frontend architectural problems on a federal legal-modernization program. Architected a modular Angular component library that consolidated UI across the platform.
 - ▶ **CTO Team / Internal Developer Platform (Jan 2022 – Feb 2023)** — Helped build an internal developer platform: CLI tooling that streamlined cross-team workflows, an IoT device simulator for protocol testing, and a shared Jenkins pipeline library that standardized build/test/deploy across business units.
 - ▶ **Caseflow program (Mar 2020 – Jan 2022)** — Cut page load time on a 508-compliant federal case-management application by ~4× through state-management redesign, caching, and lazy-loading.

- ▶ Migrated the Casflow test suite to Jest and shipped 300+ tests as part of a framework migration that materially raised release confidence and shortened the regression cycle.
- ▶ Implemented automated accessibility testing in CI to enforce Section 508 conformance across releases — a compliance gate the program had previously been carrying manually.

NewWave Telecom & Technologies

Jun 2018 – Mar 2020

Sr. Full Stack Developer · Jun 2019 – Mar 2020 (promoted)

Full Stack Developer · Jun 2018 – Jun 2019

Stack: Node.js / React · **Cloud:** Azure · **Domain:** Federal / Health

- ▶ Led a 5-engineer cross-functional team delivering an enterprise storage solution ahead of schedule for a federal health customer.
- ▶ Designed and maintained a private NPM registry plus a reusable design-system package that reduced UI development time across product teams.
- ▶ Built a microservice transport utility for Azure Service Bus integration supporting high-volume, reliable message processing across federated services.
- ▶ Earlier (pre-promotion): led an application scaffolding proof of concept to accelerate delivery for new teams; built a secure document-sharing platform with encryption and access controls for sensitive CMS portal data.

American Society for Engineering Education (ASEE)

Oct 2016 – Jun 2018

Full Stack Developer

Stack: Ruby on Rails · **Platform:** On-prem · **Domain:** Higher Education

- ▶ Owned end-to-end delivery of multiple critical features on ASEE's primary application while sustaining production stability.
- ▶ Designed and shipped a modernized public-facing site for ASEE's primary web property; refactored the legacy Ruby codebase incrementally to improve maintainability.

The Community Partnership for the Prevention of Homelessness (TCP)

Mar 2014 – Oct 2016

System Administrator

Domain: HMIS · HUD reporting · 50+ partner organizations

- ▶ Administered and optimized the Homelessness Management Information System (HMIS) supporting 50+ partner organizations across the District.
- ▶ Built reporting automation for HUD and congressional reporting requirements — cut turnaround time and eliminated repeat data-quality errors.
- ▶ Built Excel automation workflows that reduced data-analysis effort by ~75% and removed repetitive manual work from program staff.

SELECTED PROJECTS

Composable Cloud Infrastructure Platform — Independent R&D

2025 – PRESENT

Building an async event-driven platform for composable cloud infrastructure operations: pluggable processors, capability interchangeability, and central persistence as the substrate. Designed as a foundation for agent-ready infrastructure work — agent-safe deploy paths, policy-as-code enforcement, observable multi-tenant resource provisioning, and the trusted-deployer layer that sits between an AI-generated change and production. Architecture is type-layered (sqlc → domain → API DTO → event model) and explicitly composable so capability primitives can be swapped without rewriting consumers.

Stack: Go, TypeScript / React, Postgres, Terragrunt, async event pipeline, sqlc

Public OSS & Personal Repos

github.com/ranson21

Mix of platform tooling, build/CI utilities, infrastructure automation experiments, and frontend playgrounds. Available on request and reflected in the portfolio site.

EDUCATION

Associate of Business Administration

Germanna Community College · 2009 – 2012

CERTIFICATIONS

Nielsen Norman Group — UX Certification

Twilio — Platform Certificate

Looker — Data Platform Certificate
